1. Introduction

Dublin City Council's Climate Change Action Plan 2019-2024 was approved on May 13, 2019 in accordance with the National Adaptation Framework – Planning for a Climate Resilient Ireland 2018 (NAF). The Plan was also completed in accordance with the requirements of the Covenant of Mayors (COM) for Climate & Energy to which Dublin City Council (DCC) is a signatory.

The Plan sets out 4 key targets and 219 actions that the Council will undertake in the areas of energy & buildings, transport, flood resilience, nature based solutions and resource management (Figure 1). The Plan has been developed by DCC in conjunction with the City of Dublin Energy Management Agency (Codema) and the Dublin Climate Action Regional Office (CARO). The Plan was subject to public consultation and Strategic Environmental Assessment processes. Annual progress reports are required as part of the National Adaptation Framework (NAF) and Covenant of Mayors (COM) processes. DCC has committed to reviewing and reporting on this Plan annually.

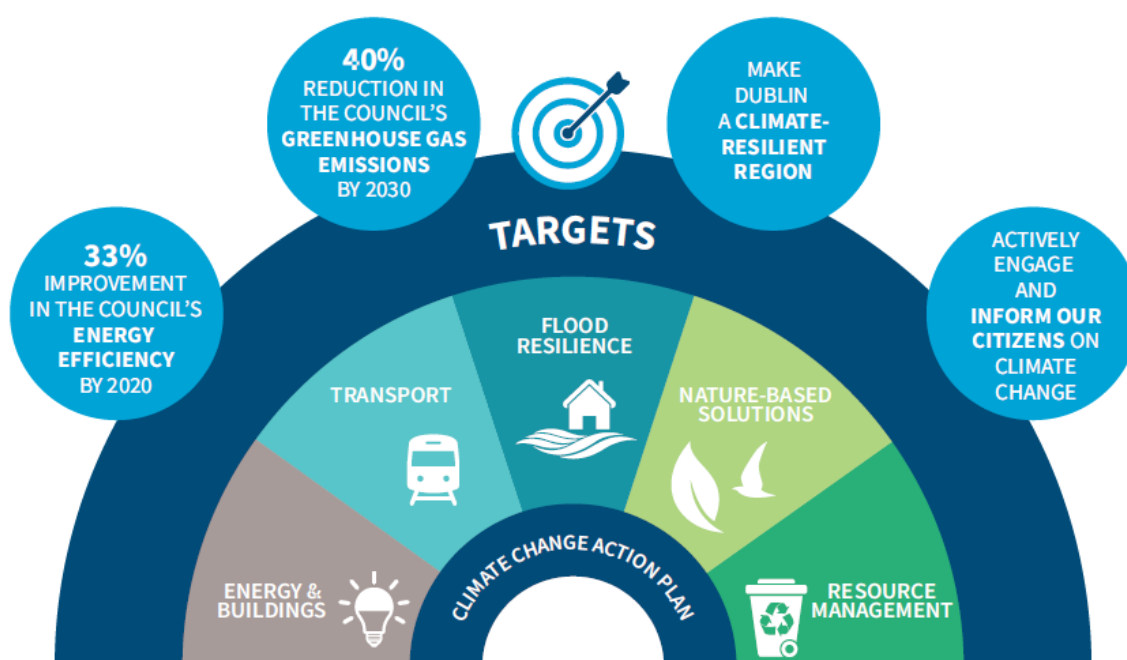

Figure 1 CCAP Targets and Action Areas

This second annual report covers the reporting period from 30th September 2020 to 30th September 2021. The report includes a discussion of policy changes within this period.

Through an ongoing process of review and refinement with teams responsible for the implementation of actions across thematic areas, the current number of actions in the CCAP is 199 actions (Figure 2). Of the 199 actions, 86.4% are ongoing, 7.5% have been completed, 6.0% have not been started and 1.5% are new. The high percentage of ongoing actions is due to actions being part of operations and service delivery, and timescales associated with actions. Appendix I provides additional detail on action progress. The overall change in number of actions is a reflection of the CCAP being a living and fluid document, responding to changes in policies and circumstances as they arise. Over the course of the plan's lifetime, this number will fluctuate.

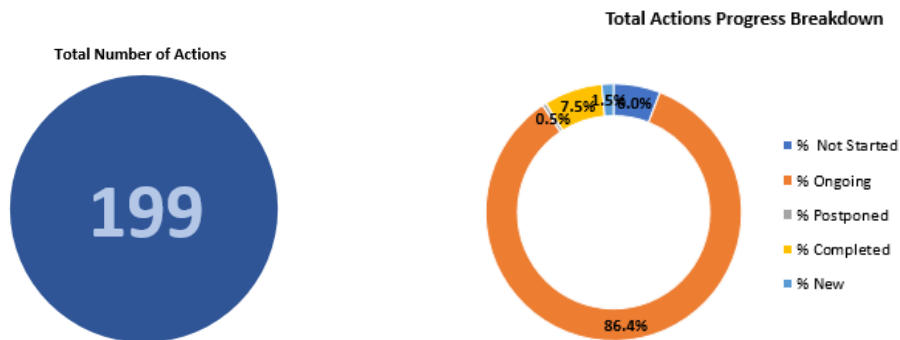

Figure 2 Actions and Progress

1.1 Climate Action Team Updates

The DCC Climate Action Team welcomed a new Executive Manager – Liam Bergin in March 2021 and in July 2021 as part of the LGMA Graduate programme two new team members, one of whom is shared with Smart Dublin.

Climate Newsletter

In January 2021, the first issue of the Dublin City Council Climate Newsletter was published. The quarterly newsletter will spotlight various Dublin City Council's climate action endeavours and projects being implemented by multiple departments in an easily digestible visual format that will be of interest to staff, communities and public representatives. Amongst the news features in the first 3 quarters were the Eat the Streets! Festival, Modos and the circular economy, active travel initiatives and the Dublin City Development Plan. Issue 4 is due to be released in Quarter 4. The newsletter has been well received and the circulation list will expand to reach a wider audience.

Third Level Engagement

Building partnerships with third level institutions in the city has been a key focus in the last year. Through DCU's MSc in Climate Change pilot capstone programme, DCC engaged with four students to work on projects in relation to resource management, fast fashion and textile waste, climate change education and community engagement in relation to illegal dumping in the NEIC. DCC Staff are now considering how to best apply the students' findings.

DCC was also approached by UCD's Diploma in Design Thinking for Sustainability for student projects; two projects were undertaken, one in relation to Modos, and another on public realm consultation processes.

TCD approached DCC in April to pilot a sustainability focused internship programme. Over a six-week period beginning in August, eight students undertook projects with the law department, waste services, environment and transport, libraries and the arts office. Staff who engaged with students were impressed with the students and their capacity to deliver high quality work in a short time frame.

In recognition of the value of the students' work to progressing climate action, DCC intends to further develop partnerships with third level. Currently DCC is in the process of reviewing the benefits of the Trinity Pilot internship programme and compiling a list of projects for the DCU MSc.

EU Programmes and Funding

European Green Capital Award 2023

DCC submitted an application for European Green Capital 2023 our application was considered amongst 15 other cities. Unfortunately, we were not a finalist city for 2023. However, the feedback from the application has provided valuable insights for improving our capacity to respond to the climate crisis.

H2020 Funding

DCC attended the Enterprise Ireland match making session to identify potential partners to submit applications for the EU Green Deal funding call. One application resulted from this, separately DCC was approached by private sector and academia. As a result, DCC submitted three applications in relation to the climate action plan:

- Call Area 4.1 DR RUBICON – IES, Lead Partner
 - Project to explore the development of a positive energy neighbourhood in Cherry Orchard
- Call Area 10.3 GREENFLOW – StarLabs, Lead Partner
 - Project focused on citizen engagement in climate action, for DCC the focus was using noise pollution to gain support for active travel and greening measures, building on the concept of quiet zones/dwell zones.
- Call Area 1.3 KAIROS - KPMG/Future Analytics, Lead Partner
 - Project focused on addressing waste management issues in the city and its impact on the environment, namely water courses and water bodies.

All three applications while scoring high were unsuccessful. DCC will consider alternative avenues for funding.

The application for CAMPAIGNers led by NUI Galway was successful and DCC is now a lighthouse city for the project which aims to enable residents of lighthouse cities to make lifestyle changes in support of a low carbon future. It is a three-year project.

In 2021/22 we will be considering further EU funding opportunities and availing of supports provided through the newly established EU Office.

IURC

In May 2021, DCC submitted an application to participate in the EU's International Urban and Regional Cooperation (IURC) programme. The application was successful and DCC is one of three EU cities partnered with cities in South Korea. Participation in IURC is an opportunity for the development of novel ideas and approaches to achieve sustainable development and increase the resilience of the city and citizens to climate change. There is a recognition that broadening our network of cities that we look to for knowledge and ideas will strengthen our own capacity to act. DCC is delighted to be partnered with Seoul, a city that is at the cutting edge of innovation in the green economy, transportation and climate action.

Events

Eat the Streets

In the fall of 2020, Dublin City Council received funding from Creative Ireland to undertake a project with a creative focus to explore climate action and support behaviour change. Recognising that we all need to eat, the seed of an idea was planted for a food and climate change project. Working with Michelle Darmody and local chefs the seed grew into Eat the Streets!

Eat the Streets! explored Dublin's rich food history by asking people, young and old to join us on a journey to Grow! Cook! Create! And Discover! It culminated in a 10-day festival of online events and activities, designed to educate and encourage participation in food growing, as well as a greater awareness of food waste. Local chefs with a passion for Irish produce taught us how to celebrate Dublin's vegetable roads taking recipes shared by young people and adding their twists and telling stories along the way in a series of Cook Alongs. Growers, farmers, experts and foodies shared their knowledge in a series of After Dinner Chats exploring our past, present and future relationship with food.

The Climate Action Team is currently working on a five-year business plan for Eat the Streets!

Figure 3 Eat the Streets Festival!

DCAW21

The four Dublin local authorities in conjunction with Codema and CARO organised 'Dublin Climate Action Week' in September 2021. The overall vision of Dublin Climate Action Week 2021 was – 'to highlight Dublin's climate action progress to its citizens and demonstrate the leadership role of the four local authorities in conjunction with other partners'.

A steering group chaired by Dun Laoghaire Rathdown County Council worked together to devise a programme of events and promotional material to showcase the shared objectives of the initiative which were to:

- Demonstrate progress on the implementation of the four Dublin local authority Climate Change Action Plans, and a regional approach to climate action;
- Engage with a full range of partners to share knowledge on efforts and innovation across sectors;

- Make climate action a ‘reality’ allowing citizens to see what climate action looks like;
- Promote this initiative so as to fully engage with EU and international cities and our climate peers; and
- Create a legacy so that this initiative can carry forward to subsequent years in a variety of ways.

The website www.dublinclimateactionweek.ie was established as a portal for information and booking of events. In total over 75 in-person and on-line events were delivered across the CCAP theme areas of Energy & Buildings, Transport, Flood Resilience, Nature Based Solutions, Resource Management and Citizen Engagement. The website continues to be a repository of information containing recordings of events and links to local authority work in the area of climate action. In addition to the website, the handle #DCAW21 was used in conjunction with regional and local videos and various media to promote and highlight the activities during the week both locally, nationally and internationally.

CARO/LGMA Training

DCC Staff continue to receive the climate action training, which is a key focus of the CARO work programme for 2021. The climate action training plan has been developed by the CAROs in collaboration with partners such as the Local Authority Environmental Services Training Group (LASTNG), Climate Ireland, the Sustainable Energy Authority of Ireland (SEAI), Met Éireann, the Environmental Protection Agency, the Institute for Public Administration and others. Training has been targeted at all staff levels and focuses on the following six pillar areas;

- Climate Action Leadership – aimed at all elected members & senior staff
- Climate Action Awareness Training – aimed at building capacity across climate action teams
- General Awareness Building – online training for all indoor staff to raise awareness of climate action
- Practical Climate Action – training for all outdoor staff to assist them to deliver practical climate action measures
- Behavioural Change Training – to empower staff to promote positive change both internally and across the community
- Specific and Targeted Training – training arising from specific knowledge gaps or individual policy/role requirements, such as spatial planning and flood risk management.

Despite COVID restrictions, the training programme advanced in interactive online formats and workshops throughout the year across all counties. Four of the six training pillars having commenced with over 6,500 staff completing the Raising Awareness training alone. Championing Leadership training has been completed by 560 senior staff and elected members across 15 local authorities and will be undertaken for Fingal, Dun Laoghaire Rathdown and South Dublin County Councils by the end of the year. Dublin County Council will complete this training in Q1 2022.

1.2 Updates to Policy and Legislation

International:

IPCC WGI Report¹

The IPCC published the first instalment of the *Sixth Assessment Report (AR6)*, *Working Group I (WGI)* in 2021. The AR6 is comprised of three working groups each with a responsibility for reviewing available research to inform AR6: WGI assessed the *Physical Science Basis* of climate change, WGII will report on *Impacts, Adaptation and Vulnerability* and WGIII will report on *Mitigation of Climate Change*.

AR6 WGI is the successor of AR5, which was released eight years ago, meaning AR6 benefits from almost a decade's worth of research and technological advancements. The aim of AR6 WGI is to assess the current evidence on the physical science of climate change. It answers key questions surrounding how emissions and other pollutants alter the climate; how plants, soils and the ocean store and release carbon; how the climate responds to human influence; and what is expected from any increases in global warming.

One of the key developments since AR5 is the strengthened evidence base linking human-caused warming and increasingly severe weather. It is clear that human activities have caused the planet to warm, resulting in every part of the planet experiencing changes in climate. The report concluded that without reaching net-zero CO₂ as well as strong reductions in other GHG emissions, the climate will continue to warm, breaching the 1.5 and 2°C limits of the Paris Agreement. Moreover, the report highlights the fact that warming will continue until mid-century, even if emissions are reduced deeply and rapidly.

Countries under the Paris Agreement are obligated to submit new or updated *Nationally Determined Contributions (NDC)* every five years, describing their countries' emission reduction and resilience building efforts for coming years. Ireland's contributions of climate action plans are submitted by the EU on behalf of its member states. The EU NDC was submitted in December 2020, committing to a reduction in emissions by at least 55% by 2030 from 1990 levels (see section on *Fit for 55*).

EU:

Fit for 55²

The European Union has set the targets of reducing emissions by 55% by 2030 and of achieving climate neutrality by 2050. In recognition of the challenge ahead *Fit for 55*, aims to bring the European Union's climate and energy legislation in line with the 2030 goal. The *Fit for 55* is a package which includes:

- Revision of the EU emissions trading system (EU ETS),
- Revision of the effort sharing regulation on member states' reduction targets in sectors outside the EU ETS
- Revision of the regulation on the inclusion of greenhouse gas emissions and removals from land use, land use change and forestry (LULUCF)
- Revision of the renewable energy directive
- Recast of the energy efficiency directive
- Revision of the directive on the deployment of alternative fuels infrastructure
- Amendment of the regulation setting CO₂ emission standards for cars and vans

¹ <https://www.ipcc.ch/report/ar6/wg1/>

² https://ec.europa.eu/commission/presscorner/detail/en/IP_21_3541

- Revision of the energy tax directive
- A carbon border adjustment mechanism
- ReFuelEU Aviation for sustainable aviation fuels
- FuelEU Maritime for a green European maritime space
- a social climate fund

EU Adaptation Strategy

In February 2021, the EU Commission adopted a new EU Adaptation Strategy to climate change. This new strategy was announced in the European Green Deal and builds on the 2018 evaluation of the 2013 EU Adaptation Strategy. The Strategy sets out how the EU can adapt to climate change risks and become climate resilient by 2050. The strategy contains four principal objectives: smarter adaptation, faster adaptation, more systemic adaptation and stepping up international action for climate resilience. Overall, these objectives cover, respectively:

- Increased data gathering that enhances the European platform for adaptation knowledge, Climate-ADAPT
- Quick and comprehensive adaptation, focusing on solutions that reduce climate-related risks, increases climate protection and safeguarding the availability of fresh water.
- Combat climate changes impact on all levels of society and across all sectors with adaptation following 3 cross-cutting priorities:
 - integrating adaptation into macro-fiscal policy,
 - nature-based solutions for adaptation
 - local adaptation action
- Provision of resources, prioritising action, increasing effectiveness, scaling up international finance and stronger global engagement and exchanges on adaptation.

National:

Climate Action and Low Carbon Development (Amendment) Act 2021

In March 2021, the Government published the new Climate Action and Low Carbon Development (Amendment) Bill 2021, which was enacted in July 2021. The Act creates a legally binding framework that was introduced to ensure Ireland achieved national, EU and international climate goals and obligations. The bill creates a statutory basis for a national climate objective to "pursue and achieve a transition to a climate resilient, biodiversity-rich, environmentally-sustainable and climate-neutral economy". Changes in the bill include:

- Economy-wide five-year carbon budgets, with sectoral targets on a 15-year basis, starting in 2021
- Climate Action Plan actions for each sector to be updated annually
- A Long-Term Climate Action Strategy will be prepared every 5 years
- Government ministers responsible to an Oireachtas Committee each year to account for their performance towards sectoral targets
- A strengthened role for the Climate Change Advisory Committee
- Local Authorities are to prepare climate change action plans that include both adaptation and mitigation, to be updated every 5 years. In addition, local authority development plans must align with their climate change action plans

- All public bodies are obligated to perform in a manner consistent with national climate plans and strategies
- Commits the State to achieve a reduction in GHG emissions of 51% (relative to 2018 levels) by 2030 and reach carbon-neutrality by 2050, guided by 5-year carbon budgets produced by the CCAC.

State of the Environment³

The Environmental Protection Agency (EPA) is required by statute to assess the state of Ireland's natural environment. These reports are released in four-year intervals, encompassing an integrated assessment that is used to inform the public, policymakers and key economic sectors in order to protect the environment. The current report, released in late 2020, is the seventh report to be published in this series. It provides information on the quality of Ireland's environment as well as the environmental challenges the country faces both nationally and globally.

The findings of the report published in 2020 revealed that the overall quality of Ireland's environment is not what it should be, and requires accelerated implementation of solutions across all sectors of society. The integrated assessment highlighted the need for urgent approaches to address climate change and biodiversity decline, as well as water pollution, recycling rates, air quality, and radiological risks. While the report outlines numerous challenges ahead, and the need for accelerated, cross-societal action there is also mention of advances made since the first state of the environment report was published in 1996. For example, there have been successes in industrial regulations and emissions, waste management and wastewater discharges.

Overall, the key message of the report is to highlight the intrinsic ties between our environment and human health. The assessment calls for revaluations in managing land uses and practises in order to protect the environment - especially in terms of uses and practises that threaten both the environment and human health, noting this decade as a pivotal moment in time to act.

Status of Ireland's Climate 2020⁴

The *Status of Ireland's Climate* report was first published in 2013; this document is the second status report, which provides an updated analysis of past and present climate observations. The assessment is a collaboration between organisations both public and private, Irish and international. The assessment is based on almost 50 internationally defined essential climate variables. It also reports on Ireland's climate-observing infrastructure, importantly, where there are gaps, and areas that need to be enhanced. The observations stated in the report enhance our understanding of Ireland's changing climate and informs the assessment of actions required to reduce carbon emissions and adapt to climate change. Reports of this nature and calibre are required to observe climate change and identify and develop the necessary climate actions. The key findings of the report include:

³ <https://www.epa.ie/our-services/monitoring--assessment/assessment/irelands-environment/state-of-environment-report/>

⁴ https://www.epa.ie/publications/research/climate-change/Research_Report_386.pdf

- Ireland's climate is warmer and wetter in recent decades, with CO₂, methane and nitrous oxide the main drivers behind the climate's changes having increased since 2012, a trend that is being experienced globally.
- Sea level, acidity and temperature have increased, causing changes in Ireland's ocean ecosystems
- Artificial surfaces and forests in Ireland have increased since 1990, while wetland areas have decreased, in terms of land area sizes.

National Development Plan Review

The National Planning Framework (NPF) and the National Development Plan (NDP) combine to form Project Ireland 2040. The aim of Project Ireland 2040 is supporting a growing population with new jobs, new homes, heightened cultural and social amenities, enhanced regional connectivity and improved environmental sustainability. The current NDP is on a 2018-2027 cycle with an investment of €116b. However, the Government has committed to reviewing the NDP with an approved budget of €165b, extending the NDP to 2030. The public consultation on the *Review to Renew* ran from November 2020 to April 2021. The final review of the NDP is expected to be released in 2021 Q4. The reason behind the review is the need to take climate-associated risks into consideration, taking an integrated approach in the NDP, that will reduce climate impacts and make Ireland climate resilient.

Draft Development Plan Guidelines⁵

Local Authority development plans are the principal planning strategy document that outlines and guides the local authority's development over a six-year period. A development plan covers the physical, economic, social and environmental needs of the community while supporting development, enhancing assets and protecting the environment. They are crucial in connecting national and regional policy priorities with local approaches to policy development. The last Development Plan Guidelines were published in 2007. Currently, the Department of Housing, Local Government and Heritage have released the Draft Development Plan Guidelines for public consultation from August 2021 to October 2021; the submissions from this public consultation will inform the finalised Guidelines. In terms of climate action, the Guidelines draw attention to the role of the development plan in "land-use aspects of climate action (and the local authority's own climate action plan) and how the planning system can be utilised to effect positive change and action," specifically:

- Compact Growth and Sustainable Mobility
- Importance of Sustainable Transport Measures
- Energy Related Objectives
- The role of Nature-based Solutions
- Flooding and Water Management in Mitigating and Adapting to Climate Change

The Climate Action Team liaised with the Development Plan Team to assist in their response to the consultation.

Framework for Ireland's Offshore Electricity Transmission System

The *Framework for Ireland's Offshore Electricity Transmission System* will facilitate Ireland's offshore wind energy to help the country meet its GHG emission targets. The policy was released by the

⁵ <https://www.gov.ie/en/consultation/ef157-public-consultation-on-the-draft-development-plan-guidelines-for-planning-authorities/>

Department of the Environment, Climate and Communications and approved by Government in April, after a public consultation in the summer of 2020. It will provide clarity for the *Commission for Regulation of Utilities* (CRU), EirGrid, ESB Networks, local communities, the renewable energy industry, and NGOs in advance of the three phases of offshore -wind *Renewable Energy Support Scheme* (RESS) auctions. These auctions will enable Ireland to meet the 5GW objective by the end of this decade. This new offshore transmission system policy includes:

- A phased transition from the current decentralised offshore transmission system model to a centralised model over the course of this decade. This will take place in line with the 3 scheduled offshore RESS auctions.
- The transmission system assets will be planned, developed, owned and operated by EirGrid

Local:

Corporate Strategy

Dublin City Council Corporate Plan 2020 – 2024 sets out the local authority's strategic framework for action for a 5-year period. Developed during 2019 through engagement and consultation with Elected Members, staff, members of the public and the Public Participation Network (PPN), a key goal of the Corporate Plan is to work towards achieving a green, low carbon city.

Plan acknowledges that taking action to adapt to and mitigate the environmental, economic and social impacts of climate change must be a key priority for the City Council and that critical to success in this regard will be making climate action a priority and adopting a whole -of-organisation approach to dealing with it.

Further, acknowledging that the 17 UN Sustainable Development Goals (SDGs) provide a framework for achieving a whole of organisation approach to sustainable development we have undertaken a mapping exercise to identify areas where we are meeting the SDGs and areas we need to progress. This work is ongoing, and will be valuable improving quality of life in the city for all.

City Development Plan 2022-2028

The most recent Dublin City Development Plan is employed from 2016-2022. DCC is currently reviewing this development plan and preparing a new City Development Plan that will operate up to 2028. The Dublin City Development Plan (2022–2028) will set out an integrated, coherent spatial framework to ensure our city is developed in an inclusive way, which improves the quality of life for its citizens, and ensures that it is an attractive place to live, work and visit. The plan will guide future growth and development, and provides the overall strategy to achieve proper planning and sustainable development, through a range of policies and objectives.

The pre-draft consultation ended in February 2021, with 752 submissions. The Chief Executive's response to these submissions have been prepared and submitted to the City Council for the Elected Members consideration. After this stage, the draft development plan will be prepared and submitted to the members for their considerations in November 2021.

Of importance for the City Development Plan, is the Climate Action and Low Carbon Development (Amendment) Act 2021, which included an amendment of Section 10(2) (n) of the Planning and Development Act 2000 whereby, to reduce anthropogenic greenhouse gas emissions as well as addressing adaptation requirements, Development Plans will need to take account of Local Authority Climate Action Plans. The integration of climate action has been a priority for DCC from the beginning of the process. Councillors, particularly members of Climate Action, Environment and Energy Strategic Policy Committee (SPC) have been active in ensuring that climate mitigation and

adaptation measures are embedded in the forthcoming development plan given the critical role of land-use planning. The Climate Action Team will continue to engage with the Development Plan Team to ensure that the city's future is climate resilient.

Local Economic and Community Plan

Dublin City Council produced the first Local Economic and Community Plan (LECP) 2016 to 2021 in line with the guidelines and provisions of the Local Government Reform Act 2014, which provides a stronger and clearer role for local government in economic development and community development. This is a key element in achieving the vision set out in **Putting People First: Action Programme for Effective Local Government**: that *“local government will be the main vehicle of governance and public service at local level, leading economic, social and community development”*. For the first time, the legislation required the integration of local economic and community objectives and other relevant cross-sectoral plans and the establishment of new structures such as the Local Community Development Committees (LCDCs) and Public Participation Networks (PPNs). The first LECP was successful in facilitating the collaboration between partner agencies, business and the community and voluntary sector and in delivering on a wide range of actions.

We are now awaiting the circulation of new guidelines that will set out the process to develop the next LECP for Dublin city which will provide the opportunity to reflect on the experiences of all stakeholders in the intervening period. The processes to support the development of a new LECP described in these guidelines should be fully informed by the learning and experiences of all relevant stakeholders through both internal and public consultation to ensure a robust LECP for the next 6-year period.

The purpose of the LECP, as provided for in the Local Government Reform Act 2014, is to set out, for a six-year period, the objectives and actions needed to promote and support the economic development and the local and community development of the relevant local authority area, both by itself directly and in partnership with other economic and community development stakeholders.

The LECP process should be considered within the context of a 2-part process involving

- a) the development of an overall LECP framework detailing the High Level Goals and Sustainable Community and Economic Objectives as well as consideration of outcomes and high level indicators for the 6 year LECP period.
- b) Annual Implementation plans to detail the required inputs, actions and resources required for that period as well as relevant specific key performance indicators to facilitate evaluation.

Issues and challenges identified in the consultation include but are not limited to the following:

- Need to allow for flexibility and agility
- Social Inclusion
- Wellbeing
- Climate Change
- Collaboration
- Emerging Needs
- Social Infrastructure
- Redefining disadvantage

Biodiversity Action Plan⁶

Dublin City Council is preparing a new Biodiversity Action Plan for the next five years. The Arts, Culture, Leisure and Recreation Strategic Policy Committee received a report on the Draft Plan and agreed for a public consultation to take place. A four-week consultation was carried out from 19th May 2021 to 16th June 2021. The input from the public consultation will be reviewed and the revised plan will be brought to the Strategic Policy Committee for final agreement. Following the final agreement, Dublin City Council will adopt the Biodiversity Action Plan as policy later this year.

The progress of the Biodiversity Action Plan will be reviewed annually and will be reported to the Strategic Policy Committee. The Biodiversity Action Plan will also inform policies and objectives of Dublin City Council's Development Plan.

The Biodiversity Action Plan has set objectives under six themes, which include:

- Maintaining Nature in the City
- Restoring Nature in the City
- Building for Biodiversity
- Dublin as a Green Capital City
- Understanding Biodiversity in the City
- Partnering for Biodiversity

Heritage Plan

The first Dublin City Heritage Plan was for the cycle of 2002-2006, with a new Dublin City Heritage Plan expected to be prepared throughout 2020-2021, Dublin City Strategic Heritage Plan 2022 – 2026. The aim of the heritage plan is to "foster a sense of understanding, involvement, belonging, ownership and enjoyment in the city's heritage". In terms of climate action, the crossover with heritage lies in environmental heritage. Current works in this area include an urban tree survey, bat conservation, hedgerow conservation and natural heritage surveys.

1.3 Covenant of Mayors

The Lord Mayor has signed the revised Covenant of Mayors (CoM). Under the renewed ambitions CoM signatories, will commit to reaching climate neutrality by 2050, increasing our emission reduction targets, implementing adaptation to climate change measures and alleviating energy poverty through a just transition. Further, we commit to engaging our citizens, businesses and local stakeholders in the transition, thus contributing to the European Climate Pact.

2. Actions Update

2.1 Mitigation

DCC continues to make significant progress towards our mitigation targets. We have met and exceeded our 2020 target, achieving an improvement in energy efficiency of 49.2% from our 2006 baseline, surpassing our 2020 target of 33%. This was achieved through a range of projects, which will continue to play a role in progress towards our 2030 target of a 51% reduction in emissions. By

⁶ <https://consultation.dublincity.ie/parks/draft-dublin-city-biodiversity-action-plan/>
https://consultation.dublincity.ie/parks/draft-dublin-city-biodiversity-action-plan/supporting_documents/DCCDraftBiodiversityActionPlan_20212025_issued19.05.21.pdf

the end of 2020, DCC has achieved a 26% reduction in emissions to 28,341 tCO₂e (49% Electricity, 35% Thermal and 15% Transport) from our operations and service delivery.

While this is very positive, a large proportion of the reduction is attributable to the increasing percentage of renewables on the national grid. An ongoing challenge is the thermal element which has only recorded a marginal reduction in the same period. DCC has identified the gap to target and has a list of projects for our building stock that will enable progress towards our 2030 and 2050 targets.

The 2030 CO₂e target of 51% from the baseline year of 2018 aligns with the Amended Act, however, it has yet to be determined if this is a city-wide target which would expand the scope of mitigation actions beyond reducing emissions from our operations and service delivery. The Amended Act requires that local authorities to produce climate action plans. The scope of the plans is being debated, and it is yet to be determined if the mitigation actions will need to be expanded to cover the entire city, similar to adaptation actions.

2.2 Adaptation

Making Dublin resilient to climate change is a target of CCAP, this calls for adapting the city and residents for a future where we live with the impacts of climate change, such as flooding, extreme temperatures, and extreme weather events, that are locked in and are prepared for the unknown impacts.

Actions in adaptation can be categorised as:

- Soft measures that are focused on behavior change and awareness raising, and policy and planning. A good example of this in Ireland is the information provided by the Office of Public Works on being winter ready and preparing and protecting your home for a storm, flood event.
- Green/blue infrastructure measures are another category; these are measures that use nature to build resilience to climate change. Examples of this would be green roofs, and green walls, and sustainable urban drainage, which many cities around the world are implementing. These measures have multiple benefits in that they cool the city in the summer, and provide flood alleviation.
- Gray infrastructure would be physical measures such as walls and attenuation tanks.

Uncertainty adds to the challenge of implementing actions that contribute to the city's resilience. Despite this DCC has made progress in the implementation of actions that contribute to our overall resilience, particularly in the use of nature-based solutions to respond to flood risk in the city.

The long-term challenge is ensuring that the adaptation actions we implement are just. The forthcoming city development plan will be vital to making the city and residents resilient to climate change. The decisions we make about land-use and land-use change will determine our adaptive capacity. The location of housing, employment determines our vulnerability and exposure to climate risk.

A climate resilient city is a city where all citizens have access to their basic needs in 15 minutes, and planning plays a key role in this.

2.3. Energy & Buildings – Actions

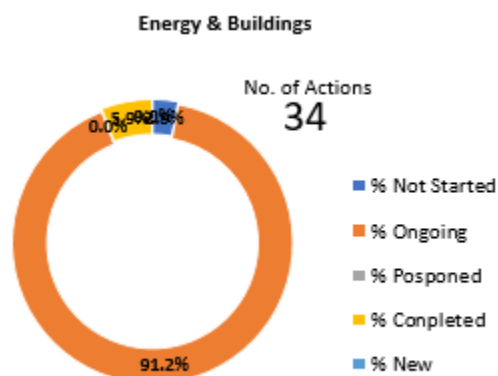

Figure 4 Energy & Buildings

DCC has achieved significant progress on actions under the thematic area of Energy and Buildings. As stated, the CCAP actions are focused on DCC's use of energy in owned, operated and managed buildings. Preliminary data from the SEAI Monitoring and Reporting (M&R) process, which has been completed for 2020, indicates that DCC have reached and exceeded our 2020 energy efficiency target of 33%. Currently, we have reached 49.2% energy efficiency. Under the Amended Act, we will need to achieve a 51% reduction in GHG emissions by 2030, and neutrality by 2050

Achieving this target will be supported by ongoing projects including district heating, retrofitting, and energy efficiency upgrades.

Dublin Waste to Energy & Dublin District Heating Scheme

Over 1500 tons of waste arrive each day at the Dublin Waste to Energy Facility to be incinerated to produce electricity to power 100,000 homes. Plans are ongoing to harness the waste heat from the Facility for the Dublin District Heating Scheme. It is anticipated that 50,000 homes and businesses can be heated from a low carbon heat source. Supplying heat through district heating will alleviate demand on the grid for electricity to heat homes, insuring the availability of electricity for other uses. DCC recognises that district heating enables resilience of critical infrastructure to climate change, and will continue to identify opportunities to implement district heating projects that benefit communities.

Further, the Dublin Waste to Energy Community Gain Projects Grant Scheme provides financial assistance for the development of environmental, community, educational, recreational, and local heritage projects and works, which will be of benefit to the communities in the Irishtown, Ringsend and Sandymount catchment area. Since the Community Gain Projects Grant Scheme was established in 2016, Dublin Waste to Energy Limited has contributed circa €11m to over 100 projects.

In 2020 the Community Gain Projects Grant Scheme funded a project proposed by the Irish Nautical Trust's to modify a boat into the Liffey River Sweeper. The Sweeper is removing waste from the River Liffey and the Grand Canal, preventing it from entering Dublin Bay and causing further environmental damage.

Social Housing

COVID has had an impact on the progress of Phase II of the programme, as the health and safety of tenants and contractors is DCC's top priority. Works were not undertaken in Q1 and Q2, but have commenced in Q3. The target for retrofits is 200 units a year over the next three years, however, this may decrease. Beyond COVID, consideration will need to be given to emerging targets as set by the Department of Housing, Planning and Local Government and Department of Energy Climate and Communications.

The Energy Efficiency Fabric Upgrade Programme is designed to reduce unnecessary energy consumption, greenhouse gas emissions and demands for non-renewable resources in Dublin City Councils housing stock.

It also provides tenants with healthier living conditions and offers significant money savings in heating costs.

Phase Two of the programme involves the following upgrades:

- External Wall Insulation
- 300mm Attic/Cavity Insulation
- Roof and Wall Ventilation
- Hot Water Cylinder
- Windows and Doors where required
- Heat pumps

Figure 5 Housing Before Upgrade

Figure 6 Housing After Upgrade

Energy Performance Contracting and Energy Efficiency Upgrades

EPCII is Dublin City Council's second Energy Performance Contract mitigating risk through a performance guarantee across 7 large Council Leisure and Community Sports Centres. The contract entered service phase in 2020 and measured and verified results for Q1 2021 showed a reduction in carbon emissions of 280 tonnes, representing a 55% decrease when compared to the 2016 baseline. The Energy Services Company (ESCo) used a suite of measures to achieve these savings including new CHP, LED upgrade, controls, new pumps, new BMS, PV panels and more. Savings are anticipated to increase as the ESCo becomes more familiar with the buildings' systems and continues to adjust performance as incentivised through the contract.

The O'Brien Institute (in progress, energy and lighting upgrade) is the training centre for Dublin Fire Brigade. It is an old building of historic significance and a key piece of infrastructure in the training of firefighters to serve the City. Energy efficiency works on the building were guided by the historical fabric of the building, which would not permit deep retrofit. Efficient low temperature hot water (LTHW) and domestic hot water (DHW) gas boilers, and modern flues were installed along with pumps, building management system (BMS) and control panels to replace the oil fired boiler. Radiator circuit modifications together with Thermostatic Radiator Values (TRV) and an LED lighting upgrade completed the project. The contractor was procured under a performance guarantee schedule, with a boiler seasonal efficiency of 85% or more with an incentivised payment mechanism.

The Recco building (is a building that is owned by DCC but is leased out to a youth project). An Energy Performance Guarantee for a full lighting retrofit together with PV panels were considered a sufficient upgrade at this stage as the building is only 15 years old. The contractor is incentivised to deliver at least a 65% reduction in electrical load on the relevant circuits through the form of contract with guarantees performance.

Dublin Region Energy Master Plan

Codema is developing the Dublin Regional Energy Master Plan through the SEAI Research, Development and Demonstration (RD&D) programme. The aim of this project is to evaluate and outline the cost-optimal, spatially possible and technically feasible low-carbon scenarios for Dublin to meet its 2030 and 2050 CO₂ reduction targets from the perspective of society, energy consumers and the energy sector. This project looks at the three main energy sectors (heat, electricity and transport) and the synergies between them to deliver more cost-effective low-carbon pathways for the region. It will look at current and future policy impacts and shortfalls to targets needed to make Dublin net carbon neutral by 2050. This is the first master plan of its kind in Ireland to look at the County and small area level and to assess which solutions will work best within local constraints. The finished plan will aid planners and other decision makers in all energy related plans in the future.

Sustainable Energy Communities (SEC)

Codema are the coordinators for the SEAI Sustainable Energy Communities (SEC) Programme for the Dublin and Mid East region. The seven counties (4 Dublin LAs, Kildare, Wicklow and Meath) are each provided with a mentor to help advise the SECs and move them along their progress from learning about energy and climate change, to conducting an energy master plan and registry of opportunities to finally undertaking projects. The aim is to upskill and educate but also to reduce energy consumption through behavioural change, energy efficiency, renewable and smart solutions. The seven local authorities are acting as lead applicants on behalf of the SECs for their energy master plans providing finance to activate grants and procurement expertise for hiring consultants. Work has been carried out to improve and streamline the energy master plan process, to make it more accessible for SECs, by reducing risk and highlighting Stakeholders throughout the energy master plan. The tender will last for four years and has already proved very popular with twenty-seven new SECs signing up this year, and a current total of one hundred and forty SECs.

Table 1 Energy & Buildings Funding

Currently funded	Department/ Agency	Area
-EU H2020 'Delivery of Renewable and Energy Efficiency projects across Dublin (DeliveREE)	Codema	E&B
- EU H2020 'Tomorrow' Project - creating a low-carbon transition roadmap for Dublin with citizens at the centre	Codema	E&B
- EU H2020 'Decarb City Pipes' Project - creating a roadmap to decarbonise the heating sector in Dublin with local working group (incl. DCCAE)	Codema	E&B
- SEAI RD&D 'Dublin Region Energy Masterplan' project - creating a scientific evidence-base for Dublin to identify possible zero-carbon pathways	Codema	E&B

- EU Era-Net 'REDAP' Project - creating an online 'digital twin' of the Dublin energy demand	Codema	E&B
- Climate Action Funding secured for DCC District Heating project	Codema	E&B
Smart Docklands Innovation District – Deployment of multiple smart city projects and demonstrators (flooding, environment, energy and connectivity) across docklands working across industry, academia and engaging local residents/communities. Partnership with Science Foundation Ireland (SFI), Enable and CONNECT research centres based in TCD (€500,000 over 2 years with co-funding from SFI)	Smart Dublin	All

2.4 Transport – Actions

Figure 7 Transport Progress

COVID continues to shape the City's capacity to respond to emissions from transport. As the city is re-opening enabling people and goods to move in out of the city continues to be a priority. The COVID Mobility team has been pivotal in this and is further supported by the Office of City Recovery established in April 2021 to re-animate the city as the country re-opened.

Active Travel

Encouraging residents to shift to active travel has been supported by making the pedestrian trials in summer 2020 permanent in 2021. Additional trials were undertaken in summer 2021 and are now currently under review. Further, cycling infrastructure projects continue to be implemented on a trial basis; simultaneously work is ongoing to assess their future feasibility.

In 2021, the dublinbikes scheme received two improvements. The first was the re-launch of the NOW TV dublinbikes app with improved functionality, users of the app are now able to sign up and

start cycling, check availability of bikes at stations, report issues with bikes, release a bike from a station, rate the bikes, and access their journey statistics. The second was the addition of 800 e-bikes to the dublinbike fleet.

We are also opening two new cycling parking facilities on the North side of the city, bringing the total to three covered cycle parking facilities in the city.

Public Realm

Providing people with a high-quality public realm continues to be a priority. Work is ongoing on key public realm projects that will not only contribute to the city's efforts to promote active travel, but increase the city's resilience to climate change by including sustainable urban drainage, green infrastructure and blue infrastructure.

As the city emerges from COVID the Office of City Recovery emphasized the immediate need and implementation of improvements to public realm and has identified areas: South Anne Street, Duke Street, Suffolk Street, Lemon Street, South William Street, Castlemarket, Talbot Street, Talbot Lane and North Earl, providing further support for the Heart of Dublin Public Realm Plan and actions in the Climate Change Action Plan.

The city is in the process of developing the 2022 to 2028 City Development Plan; the experience of the COVID pandemic has driven home the importance of ensuring that Dublin is a 15-minute city, where all citizens have access to their basic needs. Sustainable growth, low carbon development, and climate resilience will be critical in this plan.

DCC Fleet and Staff Travel

DCC has implemented a strategy to convert vehicles in the fleet to EVs. Currently there are 43 EVs. Conversion of the fleet is not without challenges, in particular the capacity distribution network in depots to support EV charging infrastructure.

As staff return to the office, recognising the importance of leading by example, DCC continues to support staff in choosing active modes of transport to and from work, and to meetings. To date there are 120 staff who have signed up for the Smart Mobility Hub (SMH) in the Civic Offices which provides staff with push bikes, e-bikes and electric vehicles to use to attend meetings. Phase II of the project has started and six new locations have commenced operating with 27 new vehicles (bikes, e-bikes and EVs).

► How does it work?

1x Renault Fluence in DCC

3x Bleeper bikes in DCC

www.SmartDublin.ie

@SmartDublin

1x booking app for all test sites

10x Nissan Leafs between test sites

40x Bleeper ebikes (with smart locks) between test sites

Figure 8 Smart Mobility Hub

Smart Dublin: Transport Projects

Dublin Cycling Buddy

Dublin Cycling Buddy officially launched in May 2021 and is a cycling community smartphone app developed to help Dublin City Council use cyclists' shared data to identify city-cycling routes for development and upgrade. The Dublin Cycling Buddy app was developed by Uemotional, a Prague-based company. The 'ride data' and the comments logged by users provide a continuous stream of data that provide information to improve cycling routes across Dublin city.

WeCount – Citizen Science for Traffic and Air Pollution Monitoring

The WeCount project is a citizen engagement project led by UCD Spatial Dynamics Lab, which aims to measure road traffic and air pollution. Road traffic has an impact on public health and the liveability of communities due to the creation of air pollution, noise, and risks associated with unsafe driving.

WeCount is a European project which empowers citizens by providing them with low cost sensors to monitor traffic in front of their homes. There are six cities involved in the project as case studies: Dublin; Cardiff; Barcelona; Madrid; Leuven and Ljubljana.

UCD is also engaging schools, specifically, in Dublin 8, through the WeCount project. Primary and secondary schools will be provided with one traffic sensor and one air quality sensor per school. The aim of this project will be to use the collected data for educational activities within the schools that will promote active travel with the pupils and students. The data will also provide evidence for sustainable mobility policies such as speed limits around schools and the school zone initiative etc.

SENATOR Urban Freight Logistics Project

The SENATOR Urban Freight Logistics Project is an EU project that enables shared, integrated and more sustainable urban freight logistics.

The SENATOR project aspires to decrease CO2 emissions by 10% from the sector. The goal is to improve the liveability of cities by addressing traffic congestion due to commercial vehicles, inefficient use of loading bays and an inefficient urban logistics system.

Dublin city is one of two pilot cities chosen in the project. The other city is Zaragoza in Spain. The pilot cities will aid in the building of a common logistics framework under European legislation that can be replicated in other locations. The trial of the SENATOR Urban Freight Logistics Project will take place in retail and commercial districts in Dublin city centre where space is limited for deliveries and commercial vehicles.

The Irish partners include Dublin City Council, An Post and University College Dublin. The international partners include Correas, University of Deusto, Zaragoza City Council, Software AG, MDS Transmodal, RINA-Consulting S.P.A, Zabala Innovation Consulting and DOTGIS.

Last Mile Delivery

The Last Mile Delivery project was launched in late 2018 and is co-funded by Dublin City Council, in partnership with Belfast City Council, and Enterprise Ireland as part of the Small Business Innovation Research Programme. This project is a pre-commercial procurement challenge, which sought to identify tech solutions that can improve urban deliveries, reduce congestion, improve air quality, reduce noise pollution and increase road safety.

Phase 1 saw funding secured for six companies to develop their solutions, these companies included Fernhay-UPS, GridSmarterCities, Masterlink Logistics, Passel, ParkUnload and WeDispatch. Solutions including consolidation hubs were provided to make deliveries using vehicles, which included e-vehicles, e-bikes and cargo bikes as well as the digitisation of kerbside bookings. Newer forms of low emission deliveries in the inner city were addressed with new prototypes of pedal powered and walked delivery vehicles.

Table 2 Transport Project Funding

Currently funded	Department/ Agency	Area
Smart Workplace Mobility Hub - Small business innovation challenge (SBIR) - E-cars, e-bikes, app and booking system for workplaces –multiple pilot projects, phase 2 includes scale up project with Sixt, Nissan, UCD, GTS & Bleeperbike. €200k (Co-funded with EI)	Smart Dublin	Transport
Last Mile Delivery - Small business innovation challenge (SBIR)–piloting multiple projects on digital kerbside, sustainable last mile deliveries. Phase 2 underway. €220k (co funded with EI)	Smart Dublin	Transport

Mobility as a service (MaaS) - work programme in partnership with the NTA – €50k funding from DEPR through Smart Dublin	Smart Dublin	Transport
Smart Docklands Innovation District – Deployment of multiple smart city projects and demonstrators (flooding, environment, energy and connectivity) across docklands working across industry, academia and engaging local residents/communities. Partnership with Science Foundation Ireland (SFI), Enable and CONNECT research centres based in TCD (€500,000 over 2 years with co-funding from SFI)	Smart Dublin	All

2.5 Flood Resilience – Actions

Figure 9 Flood Resilience Progress

Drainage Planning & Sustainable Urban Drainage Systems

It has become increasingly apparent that, because of climate change, rainfall patterns in Dublin have changed from the previous low intensity long duration type rain to shorter and far more intensive rainfall events. In recognition of this DCC is progressing a number of nature-based water retention measures using a sustainable urban design approach at different locations across the City. These will have the dual effect of reducing the rate of surface water runoff into sewers, thus reducing the risk of downstream and local flooding, as well as improving the water quality.

The Water Framework Division/Drainage Planning team has continued to liaise with their colleagues in Environment and Transportation, in the Parks Department and in the City Architect's Office to facilitate the implementation of this approach in particular public realm projects that are at design and construction stages. As a result, a SuDS Working Group is now established with multi-disciplinary representation from Drainage, WFD, Roads, Climate Change, Parks, City Architects and Planning. A consultant is assisting the Working Group in the development of SuDS Guidance Document to cover best practice in this area. A new Green Blue Roofs Policy will also be prepared as well as a surface water management plan, all with the view to building the city's resilience to flood risk.

Flood Risk Management & Awareness

Coastal flood risk has increased dramatically in the City over the last 20 years with an estimated 30mm+ increase in average sea level in Dublin Bay. This also leads to increased wave heights during some storm conditions. All of these factors are being included in proposed flood alleviation measures for the City.

In accordance with the OPW approach to flood risk management, DCC is actively working with communities to promote flood awareness and preparedness. The OPW provides information via two websites: floodinfo.ie and flooding.ie. The website floodinfo.ie provides information on flood risk both fluvial and coastal, based on three scenarios: low probability, medium probability and high probability. Citizens can find localised flood maps of Dublin and photos of past flood events to understand the extent to which areas were flooded. In addition to this, users can view a map of the flood plans that have been developed. The second website, flooding.ie, is focused on protection. Information provided on the website serves to inform people how to protect themselves, and their property before, during and after a flood event.

Protection of Water Bodies

DCC is working to integrate a number of projects to ensure that the opportunities to meet DCC's Water Framework Directive (WFD) obligation of achieving "good" status for all our water bodies by 2027 are maximised. Current examples are:

- Consultants have been appointed by DCC to deal with flood risk across the DCC and SDCC sections of the River Camac and this is being integrated into a desire to "de-culvert" what is now seen as an over engineered river where possible so that it can, over time, be restored to a more natural state, as far as reasonably possible. The project will also involve identifying and remedying urban pollution sources, where possible. This is also being done in conjunction with an existing Greenway proposal and in tandem with Urban Regeneration and Development Fund (URDF) funded projects in the area.
- The River Santry where DCC is preparing a brief to engage consultants as part of a URDF funded project to restore the river to a more natural state, and investigate and remedy sources of pollution. Again, this work is being designed in conjunction with a proposed Santry River Restoration and Greenway Project. This project is in collaboration with Parks, Landscape Services & Biodiversity, as well as the Sustainable Transport and Projects Section of the Roads and Traffic Division. Fingal County Council and Inland Fisheries Ireland are supportive of this scheme. Funding is mainly from the Urban Regeneration and Development Fund and, in the case of the greenway, the NTA.

Figure 10 Wad River Flood Storage

OPERANDUM

Flooding is a major hydro-meteorological event which Dublin faces and can cause poor water quality, damage to buildings and increases in traffic congestion. OPEn-air laboRAtoRies for Nature based solUtions to Manage environment risks (OPERANDUM) is a project, which develops nature-based solutions to reduce the impact of hydro-meteorological occurrences in areas that are at risk. This four-year project launched in July 2018 with 26 international partners and has received funding from the European Union's Horizon 2020 research and innovation programme. The partners of this project are Dublin City Council and University College Dublin. Note, due to COVID the project has been extended to December 2022 and a final intervention is being planned.

Table 3 Flood Resilience Project Funding

Currently funded	Department/ Agency	Area
OPERANDUM EU H2020 - Flood Mitigation and Nature Based Solutions (overall project €14,000,000, 26 partners, including University College Dublin) (€123k for DCC) Partnership with University College Dublin (Ongoing – 2 years left) OPERANDUM will deliver tools and methods for the demonstration and market uptake of Nature-Based Solutions to reduce hydro-meteorological risks. https://www.operandum-project.eu/	Smart Dublin	Flood Resilience and NBS

Gully Monitoring - Small Business Innovation Challenge (SBIR) –piloting delivery of low cost gully monitoring sensors to help mitigate flood risk. Phase 2b deployment underway. €260k (co funded through EI)	Smart Dublin	Flood Resilience
---	--------------	------------------

2.6 Nature Based Solutions – Actions

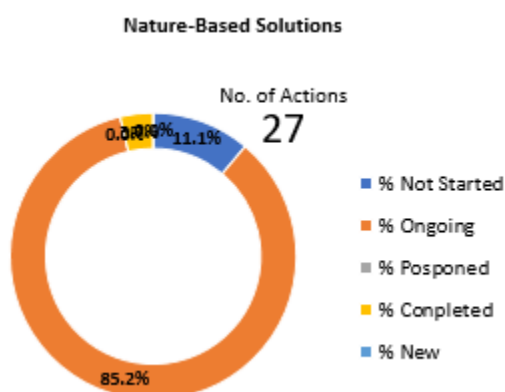

Figure 11 Nature Based Solutions Progress

Bringing nature into the city is critical to mitigating and to adapting the city to climate change. It is not without challenges, especially in a city that is built up. Recognising the value of nature as a solution to the problem of climate change DCC is actively working to implement nature-based solutions across the city.

Guiding NBS actions are the Biodiversity Plan, Tree Strategy, Public Open Space and Parks Strategy, and Invasive Species Plan. These plans have been informed by, and respond to, National and EU policy directions. Similar to Flood Resilience Actions, NBS Actions will have to respond to the sectoral adaptation plans. Fortunately, collaboration across departments and applying an interdisciplinary approach, the multiple benefits of using NBS are being prioritised. This can be seen in the formation of cross-departmental working group on sustainable urban drainage (SuDS) which will produce guidelines that will inform how SuDS solutions are implemented.

Updating Plans

In 2021 the Biodiversity Action Plan, Invasive Alien Species Action Plan and the Tree Strategy are in the process of being updated. The Biodiversity Action Plan is set to be published in Q4 2021, details are provided above. As we develop our Tree Strategy, a priority is a need to understand how changing climate is impacting trees to inform our tree management plans. We are planting more 'exotic' species that should have a greater ability to adapt to warmer/drier conditions. We need to analyse climate change impacts on the City's trees to inform management to ensure that the trees stay healthy and are able to provide their multiple benefits and contribute to the city's climate resilience. Of benefit to this is our ongoing project with UCD – Curio Tree Mapping

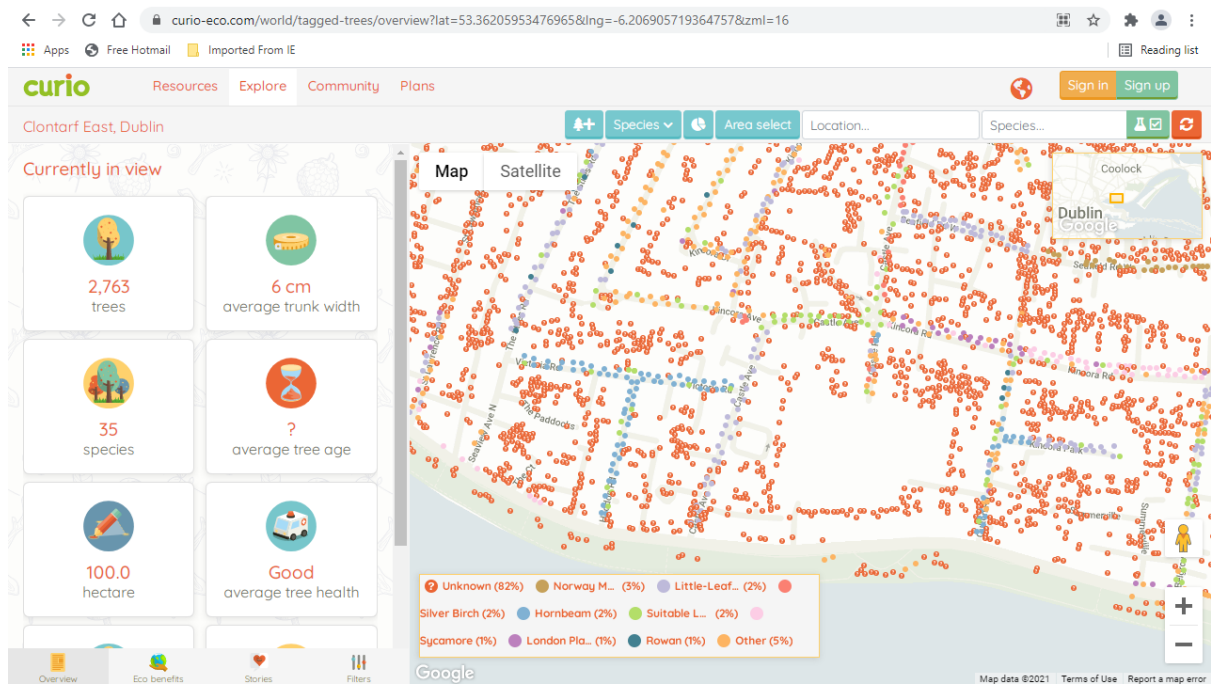

Figure 12 Curio Tree Map

Parks & Pollinators

DCC Parks has continuously been implementing changes to parks and open spaces to support biodiversity, in particular pollinators. In the last few years, DCC Parks has been working on using more pollinator friendly plants, specifically wild flowers. The grounds of the Civic Offices are illustrative of this, as is the refurbishment of St. Audoen's Park and greening interventions in areas of the city that are lacking, such as park lets in Stoneybatter.

Figure 13 Wildflower planting in Civic Offices

Greening Strategies

Prior to COVID, research was undertaken that informed the Greening Strategies for the Liberties, Stoneybatter, the North East Inner City, and the Grafton Street Quarter (Heart of Dublin Public

Realm). These are areas where there are significant deficits of green space, for example in the Liberties there is 0.7m² per person. The recommended amount is 20 to 25 m². As such increasing the amount of green space in these areas is essential. Works are ongoing in these areas and have been well accepted by the public.

2.7 Resource Management – Actions

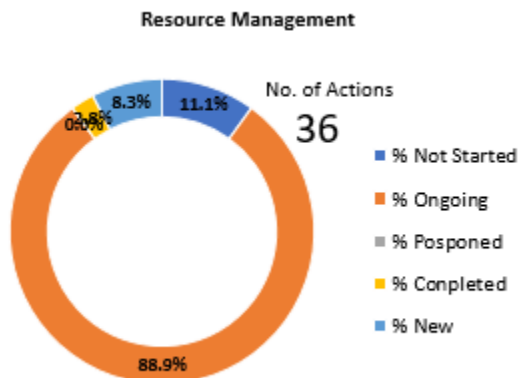

Figure 14 Resource Management Progress

Segregated Waste

The Circle City Project commenced in October 2020. During phase one, 60 Circle city bins were placed in the city centre. Phase 2 will see a doubling of “recycling on the go” bins in the city centre, coming on stream October 2021. It is estimated that 250,000 bottles/cans will be saved from landfill over the next 12 months. Waste management services is waiting for verification of the number of bottles and cans that will avoid landfill.

Figure 15 Circle City Bin

MODOS

Due to COVID MODOS has moved to an online format for 2020. The first series of online modules were delivered in September and October with 37 small and medium sized businesses participating. It is also being expanded nationally.

In 2021 included a MODOS webinar series, Pathways to a Circular Economy and a MODOS Mentoring and Innovation Award Programme for SMEs. Further, the MODOS training has been delivered in Cork between February and March 2021 as the result of a collaboration with Cork Chamber of Commerce. MODOS will be delivered as well in the Dublin 8 area between April and May 2021 as a result of a collaboration with DCC South Central Area Office and The Digital Hub.

Dublin Community Clean Up

After a two-year hiatus due to COVID, Dublin Community Clean Up 2021, was held in September. There were 90 groups within DCC area taking part.

2.8 Engagement

Businesses

Recognising that businesses will need to transition their practices to align with a low carbon future, and that they have a valuable role to play in the transition to a low carbon future, DCC has been developing programmes to engage and support businesses. Beyond Modos, in March 2021 Green for Micro programme was launched. It is a new initiative from the Local Enterprise Offices that aims to help prepare small businesses for the low carbon, more resource efficient economy of the future. It is a free programme, available to companies with up to ten employees

The Dublin region is also home to the Responsible Innovation Summit in its fifth year in 2021 and has seen the launch of the Profit with Purpose magazine showcasing examples of how businesses are leading change at home and abroad.

Community

In Dublin City Libraries, we have an extensive range of titles in stock covering topics such as climate change, the environment, sustainability, etc. available to borrow across our branch network. This includes a dedicated *Climate, Energy and Sustainability (CES)* collection in Kevin Street Library containing more than 300 titles.

Our collection also includes more than 100 Home Energy Saving Kits (HESK) available for loan in our branches. The HESK contains a number of energy saving tools to help individuals conduct their own home energy audit and to find ways to reduce their energy consumption. Each kit contains the following items:

- Fridge Freezer Thermometer;
- Thermal Leak Detector;
- Temperature & humidity meter;
- Plug-in Energy Monitor;
- Radiator Key;
- An information manual.

We also have a number of online reference resources containing accurate, reliable and up-to-date information on climate change and related topics, e.g. World Book Online, Encyclopaedia Britannica, Oxford Research Encyclopaedias, Oxford Very Short Introductions, and more.

DCC's Community Recreation and Economic Services launched *Books and Browsablees* in St Patrick's Park, which has a number of new crafts by young people who honed their skills during the lockdown and are now looking to develop their enterprise.

DCC's Arts Office is leading a Creative Ireland project "Creative Climate Action Crumlin". It is a year-long programme of events and community action that enables Artists, Residents and Climate Change Scientists to exchange knowledge, ideas, and develop projects that build the capacity to achieve the behaviour change needed to respond to the climate crisis.

The project is a collaboration between Dublin City Council, Crumlin Community Clean Up, Dublin Metropolitan Region CARO, Codema and Artists Aoife Raleigh and Dr. Niamh Shaw; involving Dublin South Central Area Office, artists living in Crumlin, local community groups and local environmental activists. A repertoire of climate action projects will be curated for the community to consider, to

reject, to deconstruct, to refine, to rebuild, to implement and to repeat this process building a framework for local climate action that can be scaled across the City and nationally.

This method will provide DCC and the community with an in-depth understanding of the barriers to current climate actions and reveal opportunities previously not considered. By collaborating with a community with a breadth and depth of knowledge, diversity, education, race, gender, and employment the potential for achieving lasting behaviour change is high.

Staff Engagement Activities:

DCC staff have been actively engaging with public through a range of activities. The table below provides an example of the breadth of events.

Table 4 Staff Public Engagement (69 events)

Date	Event	Organiser	Your Name	Role (i.e. Presenter, Panellist, moderator)
06/10/20	Climate Change Action Plan - DCC Staff Workshop	DCC	Sabrina Dekker	Organiser
06/10/20	Climate Change Action Plan - DCC Staff Workshop	DCC	Antonia Martin and Deirdre Kelly	Presenter
10/10/20	Future Talks Comhairle AGM	Comhairle Na nÓg	Sabrina Dekker	Presenter
10/10/20	Comhairle na nÓg cycling event	Comhairle Na nÓg	Deirdre Kelly	Presenter
13/10/20	Dublin 7 bike bus route testing with parents interested in setting up a bike bus.	Dublin 7 Bike Bus	Deirdre Kelly	DCC representative
21/10/20	Climate Change Action Plan - DCC Staff Workshop	DCC	Deirdre Kelly	Presenter
26/11/20	RESET Summit	DCC LEO	Sabrina Dekker	Presenter
28/11/20	Sustainable Days	DCC Events	Sabrina Dekker	Moderator
29/11/20	Online film screening of Motherload and panel discussion event as part of Sustainable Days programme. Panel speakers include Liz Canning (film director), Ellen Cullen (Dublin Cycling Campaign), Donna Cooney (Dublin Cycling Mayor and City Councillor), Joan O'Connell (Monthly Cycles) and Joanna Donnelly (RTE Weather)	DCC	Deirdre Kelly	Organiser
14/12/20	Presentation to Eurocities - Dublin Pedestrian Trials	Eurocities	Antonia Martin	Presenter
15/12/20	Presentation of bikes to winners of the school survey on the Grangegorman filtered permeability trial	DCC	Deirdre Kelly and Damien Hughes	DCC representative
19/01/21	Model Cities Anywhere	MIT	Sabrina Dekker	Presenter
28/01/21	30kph workshop for Councillors	DCC	Rosanna Carmargo	Organiser
28/01/21	30kph workshop for Councillors	DCC	Antonia Martin	Presenter
17/02/21	Presentation to Bank of America team on Covid Mobility Programme and active travel	Bank of America	Deirdre Kelly	Presenter
03/03/21	Workshop on Biodiversity with Rediscovery Centre	Dublin City Libraries	Paula Brennan	Moderator
05/03/21	How To Care for Our Environment with Enviroid kids	Dublin City Libraries	Paula Brennan	Moderator
08/03/21	ESB Networks - Towards a Low Carbon Future	ESB Networks	Cormac Healy	Presenter

10/03/21	The implementation of the Climate Action Plan for Ireland: case study initiatives A panel discussion hosted by the CIWEM Republic of Ireland	CIWEM	Sabrina Dekker	Presenter
10/03/21	TUDublin - Green Week	TUDublin	Sabrina Dekker	Presenter
15/03/21	DCU Hackathon	DCU Business	Sabrina Dekker	Mentor
18/03/21	Climate Change Action Plan - DCC Comhairle	DECC	Sabrina Dekker	Moderator
30/03/21	EMRA YouthCore	EMRA	Sabrina Dekker	Presenter
13/04/21	Future Earth Ireland - DCU	DCU	Sabrina Dekker	Panellist
13/04/21	Trinity Tangent, PG Cert in Climate Entrepreneurship	Trinity Tangent	Sabrina Dekker	Presenter
15/04/21	NESC Roundtable	NESC	Sabrina Dekker	Panellist
23/04/21	Upcycling Interior Design with Rediscover Centre	Dublin City Libraries	Paula Brennan	Moderator
28/04/21	Bicycle Maintenance with Rediscovery Centre	Dublin City Libraries	Paula Brennan	Moderator
29/04/21	Ireland Climate Summit	Environment Ireland	Sabrina Dekker	Presenter
30/04/21	Fashion Upcycling with Rediscovery Centre	Dublin City Libraries	Paula Brennan	Moderator
04/05/21	Furniture Upcycling with Rediscovery Centre	Dublin City Libraries	Paula Brennan	Moderator
13/05/21	"Get Growing in Small Spaces" a talk by Ciara Travers from National Botanic Gardens	Dublin City Libraries	Paula Brennan	Moderator
14/05/21	Presentation on Grangegorman Filtered Permeability Scheme to TU Dublin students	TU Dublin	Deirdre Kelly	Presenter
18/05/21	Canada-EU exchange webinar: Supporting local action	BPIE	Sabrina Dekker	Presenter

3. Conclusions and Future Implementation

This second report on DCC's progress on the actions set out in the *Climate Change Action Plan 2019-2024* shows that significant progress has been made, however, more needs to be done. The challenge ahead will be facilitating not only collaboration across departments to achieve an interdisciplinary approach to climate action but with stakeholders outside of DCC.

The Climate Action and Low Carbon Development (Amendment) Act 2021, a welcomed development in moving Ireland to a low carbon future provides DCC with legislative basis for taking action on climate. DCC will be required to prepare climate change action plans that include both adaptation and mitigation to be updated every 5 years. While our current plan covers both mitigation and adaptation, it is likely that this plan will need to be revised. This may provide an opportunity to strengthen our capacity to respond in that we will be re-assessing the climate risks facing the city.

As our current approach is interdisciplinary, we have an understanding of the challenges in implementation. Further, our plan is a living document that responds to emerging science and changes in policy. The primary concern with developing a new plan is that it becomes a barrier to ongoing implementation. Efforts will be made to ensure that this is not the case.

Over the next year, we are considering how the actions we implement will support a just transition, identifying data gaps and how data can inform action, a shift to a circular economy and progressing a food strategy for the city.

3.1 Just Transition

Fundamental to the city's response to climate change is the collaboration of stakeholders on actions to address vulnerabilities created by climate change. The aim should be a just transition to a low carbon climate resilient future. This is dependent on people working in concert to respond to the vulnerabilities created by climate change and actively contributing to the development and implementation of policy.

The demand for the transition to be just is supported by the Amended Act, however, the focus remains on jobs. As a signatory to the revised Covenant of Mayors, we as a city recognise that a just transition is more than employment, it is about equity.

COVID highlighted inequities and vulnerabilities that exist in Dublin that need to be addressed permanently – access, affordability and opportunity. As a city council we have demonstrated in our capacity to respond and provide citizens with services during lockdown. The challenge going forward is embedding equity as a principle in every action we take to transition Dublin to a low carbon climate resilient future. How do we measure a Just Transition?

We are working on the development a series of indicators to assess our progress in responding to the inequities. The following is a proposed list of indicators:

- Economic inequality/Cost of Living: Who bears the cost? The cost of living in the city will undoubtedly rise, how is this impacting residents?
 - Carbon Gini Index (Carbon Equity)
 - OECD Better Life Index
- Spatial measures of access: How well connected are neighbourhoods to transport options? Employment and education opportunities? Amenities? Air quality in the city? Noise pollution?

- POBAL
- Dublin City Air and Noise
- Mapping
- Health: How is population health changing? Disease incidence? Nutritional equity?
 - Gallup Health
 - Well being index
 - QoL Index
- Inclusivity: How is the experience of all residents of the city accounted for in policy? Do all residents have an opportunity to be involved?
 - Your City, Your Voice
- Volunteering rates: Needs have been met, people have time
 - Gross National Happiness Index

3.2 Data

Data is essential to monitoring progress towards our climate action targets and for informing the actions, we take to respond to the climate crisis. The availability, reliability, and robustness of data related and relevant to climate mitigation and adaptation actions is an ongoing challenge. We will be collaborating with relevant stakeholders to build capacity in data collection and analysis, to improve our monitoring of GHG emissions and climate risks, and to understand the impacts of our actions on our resilience to climate change.

This is not unique to Dublin City, and is a challenge for Ireland as a whole. Further, it is an international challenge.

At the EU level, one response to address the data deficit is the Open Data and Re Use of Public Sector Information (PSI) Directive. The aim of the Directive is to strengthen the EU's data-economy via increasing the amount of publicly held and publicly funded data for re-use. The Directive introduces an obligation for public bodies to publish their available data unless access to that data is restricted.

As a public body, DCC is obligated to follow the Directive, and this is beneficial to our capacity to take action on climate change.

The Open Data Team, which sits within DCC's Smart City Team are working to make data open, free and available for the public and academia. The Open Data team are currently in the process of identifying existing data sets within DCC's work streams. At present, the following categories for data have been identified:

- Arts Culture and Heritage
- Environment and Energy
- Planning and Land Use
- Government and Participation
- Recreation and Amenities
- Population and Communities
- Public Health and Safety
- Economy and Innovation
- Transport and Infrastructure

The Open Data Team are currently finalising their work on open data with the transportation department, and will begin to work on environmental data.

To support the building of data sets to inform decision-making, DCC's Smart Dublin team is undertaking projects to increase the data available to us to inform actions we take to make the city, these include:

Air View Dublin

Air View Dublin is an initiative that was rolled out in May 2021 and will see Google's Street View car measure air quality across the city of Dublin. This initiative was rolled out in collaboration with Dublin City Council as part of its Smart Dublin programme and Google. Air View Dublin will see Google's first electric Street View car measuring air quality for the duration of one year.

Google's electric Street View car, the Jaguar I-PACE, has been equipped with Aclima's specialised mobile air sensing platform that can measure and analyse pollutants, which at high levels are harmful to the climate and human health. These pollutants include:

- nitrogen dioxide (NO₂)
- nitrous oxide (N₂O)
- carbon dioxide (CO₂)
- carbon monoxide (CO)
- fine particulate matter (PM_{2.5})
- ozone (O₃)

The measurement of air quality through this project will produce street-by-street air pollution maps, developed by Aclima's platform, which analyses and quality assures pollution measurements

DPD Air Quality Monitoring

DPD Ireland has partnered with air quality monitoring company Pollutrack and is working with Dublin City Council and the Environmental Protection Agency on a project, which uses smart sensors on buildings and delivery vans to track Dublin's air quality in real time. The laser sensors will capture PM_{2.5} levels every 12 seconds via GSM to a database, which has been developed by Pollutrack. From this, the data produces air quality maps and hotspot areas, which record higher than average PM_{2.5} levels.

DPD Ireland will install air quality sensors on 22 buildings and 102 vehicles in Dublin. Dublin City Council has supported the installation of sensors at sites which include libraries, a bring centre and a fire station. The analysis of these sensor datasets will be carried out by DCU researchers at the Insight SFI Research Centre for Data Analytics, which can then be used for decision-making for stakeholders. Other recipients of the data will be Smart Dublin, Asthma Society of Ireland, and Irish Doctors for the Environment, Children's Health Ireland and University College Cork.

3.3 Circular City

Cities play an essential role in the development of a circular economy; they act as enablers of potential measures by which they can influence both consumers and businesses. Moreover, overall governance, enabling businesses, public procurement, consumption and resource management are all themes with a bearing on the development of circular economy concepts within cities. Dublin as a European capital city is uniquely positioned to address complex problems through practical experimentation and innovation. The transition to a circular economy requires multi-level

governance and new visions of what the city of the future could look like. Therefore, involvement at a local level is crucial for the transformation from a traditional linear approach to a circular strategy

Dublin City Council has been working with key stakeholders to plan and deliver on a range of initiatives that support a more circular approach within our Capital city, and to build further support for the development of Dublin as a Circular city. Some of the key initiatives are as follows:

MODOS

MODOS, an innovative circular economy training programme for micro, small and medium size enterprises was piloted in 2019 and expanded to a national programme in 2020, to help businesses across Ireland build sustainability into their post-COVID recovery. MODOS is designed to equip small and micro enterprises to apply circular economy principles in their business, helping them reduce waste and carbon emissions while creating opportunities to save money, increase resilience and boost competitive advantage.

Moving to a circular economy, where materials are continuously re-used and recycled, is essential if Ireland is to meet its greenhouse gas (GHG) emission reduction targets under the national Climate Action Plan. According to research by the Ellen McArthur Foundation – a leading authority on the circular economy – around 45% of GHG emissions reductions will come from applying a circular approach to how we make and use products and produce food (with the other 55% coming from switching to renewable energy sources).

As well as helping the environment, going circular could have huge social and economic benefits. In Europe alone it could save 450 million tonnes of carbon by 2030, create 580,000 jobs and save €600 billion for EU businesses, equivalent to 8% of their annual turnover. With the European Union policy and regulations for a low-carbon economy and the Irish government Green Procurement standards, Irish businesses need to understand and apply circular economy principles. Doing so will help to future proof their business and enable them to build back better.

Responsible Innovation Summit

Cities are important spaces in the transition to the circular economy, providing complex challenges and innovative solutions as well as a myriad of opportunities to create economic, social and environmental benefits. As part of the programme for the Responsible Innovation Summit 2021, the Lord Mayor moderated a panel that examined the opportunities for Dublin to become a Circular City, examining what we could learn from other cities who are engaged in circular city initiatives.

Cities offer high levels of resources, talent and collaborative potential and are already leading in terms of circular innovations areas such as manufacturing, textiles, food, construction and transport. Circular city initiatives, such as Circular Glasgow and Circular Prague, see city business networks leading the way to expedite regional and national transition towards circularity. The panel brought together national and international experts to discuss the value of a Circular Dublin to business and citizens.

Circular City Accelerator – Climate KIC

Dublin City is one of four city partners participating in the Climate KIC – Circular City Accelerator that commenced in 2021. We are working with the European Accelerator Manager with Tangent, Trinity College's Innovation and Entrepreneurship Centre. Tangent is the lead partner on the Circular Cities ClimAccelerator, a pan-European programme funded by EIT Climate KIC, supporting 15 start-up companies each attempting to scale their circular economy propositions. This Accelerator engages closely with senior management in local authorities in Dublin City Council, Berlin Senat, Copenhagen

City Council and the Municipality of Athens. Trinity College is collaborating with Denmark's Technical University (DTU) and Luvent Consulting in Berlin.

There are plans to build on the work already developed and to implement a series of new initiatives under the Dublin Region Enterprise Plan 2024 designed to place businesses as leaders in the transition to a low carbon economy.

3.4 Food Strategy

Following from Eat the Streets! interest has increased in exploring the benefits of a food strategy for the city and how it might contribute to climate action. A food strategy is a method of identifying actions that can enhance food systems (note: A food system is the full cycle of how food is grown, produced, processed, distributed, consumed and disposed of.) and may also be used to contextualize concerns of municipalities; for example, they can address public health and social issues arising from food deserts.

A food strategy that works to develop and support sustainable food systems through urban food growing, food waste management and/or redistribution can support a city's progress towards climate resilience, improve water management, improve air quality, and restore essential ecosystems and biodiversity. Acknowledging these benefits, creating a food strategy is an opportunity for DCC to address multiple issues due to the multifaceted nature of urban food systems.

In order to do this, Dublin City Council is currently undertaking research to identify food wastelands, urban food growing methods and best practices from around the world. By identifying areas experiencing food poverty, we can tailor actions to improve access to affordable and nutritional food while building the communities resilience to climate change risk and vulnerabilities. Further, we are identifying key stakeholders in government, private sector and academia to support this process, and thematic topics for citizen engagement. The overall objective is to create and facilitate a food strategy that applies a systems approach to address multiple issues, namely food security, public health, nutritional equity, climate action, biodiversity and social cohesion and contributes to our long term targets.

	T50	Support the development of bus routes including the Bus Connects programme	Dublin Bus, NTA	Environment and Transport	Ongoing		10 Years Plus	<p>To support the planned Bus Connects continuous bus corridors; multiple cross departmental meetings have been held for communication and information sharing/retrieving within DCC. This project is ongoing.</p> <p>Five new routes make up the H-spine (H1, H2, H3, H9, 6). The H-spine connects the city centre with Howth, Malahide, and Clongriffin via the Howth Road. The spine was introduced in June 2021. Multiple priority measures existed on the Howth Road prior to the H-spine commencing service which gave priority to buses at all major intersections which are controlled by SCATS. Existing Dublin public transport interface module (DPTIM) virtual detectors which were installed previous to the spine rollout were converted to the new routes. Additionally, numerous new detectors have been</p>	Ongoing	# of routes frequency of services

								<p>installed to assist the new routes. Currently, twenty-two virtual detectors assist buses on the Howth Road and surrounding side streets. In order to facilitate route 6, four new bus stops were installed along Watermill Road and parking restrictions were introduced.</p> <p>The C-spine is due to begin service in November 2021. Arrangements for the installation of bus stops at 25 locations are progressing for the C-spine. Currently, approximately ten DPTIM virtual detectors provide priority along the route of the C-spine. When the C-spine becomes live, these detectors will be converted over to the relevant new routes. This will also provide an opportunity to review these existing detectors, and install new detectors. Tara Street had been identified as a delay point on the C spine. A bus lane has been installed on Tara Street to give priority to buses on approach to</p>
